

# CITY TOP K

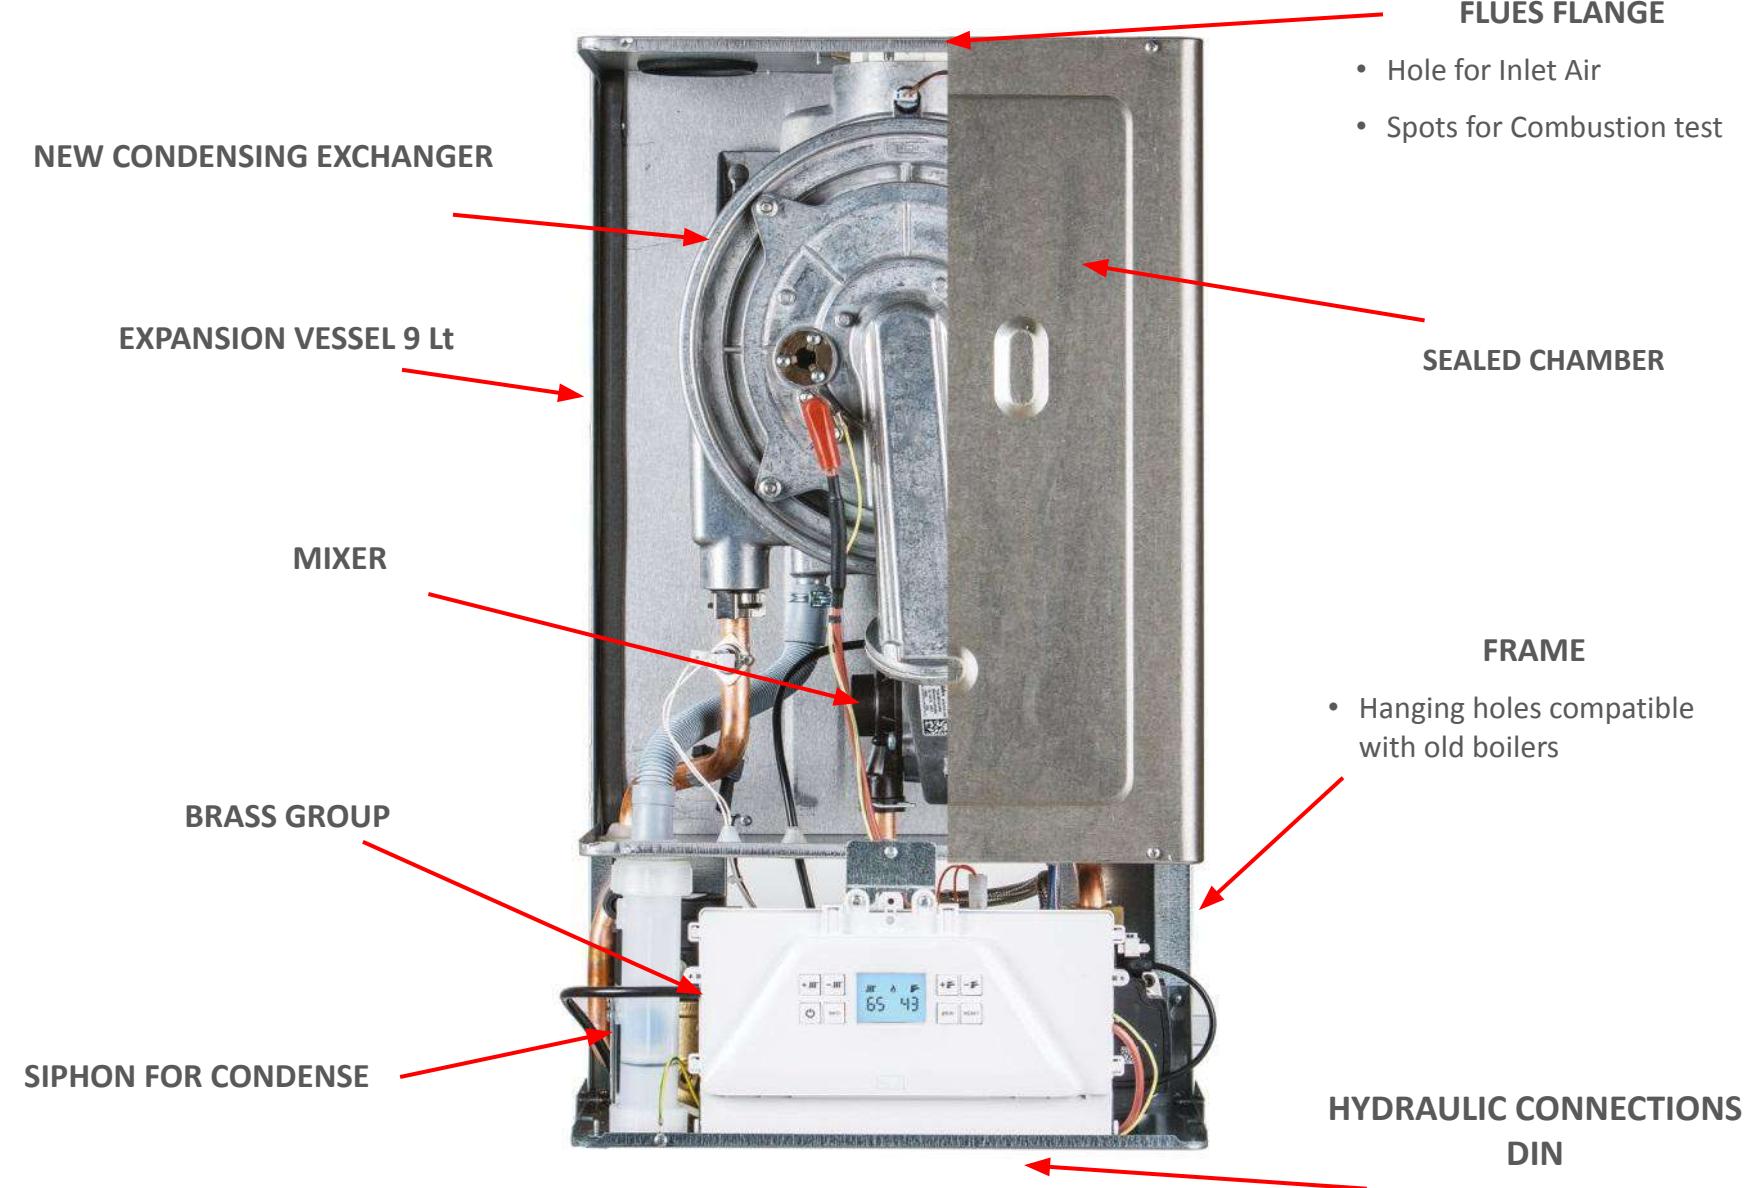

## 10/2020

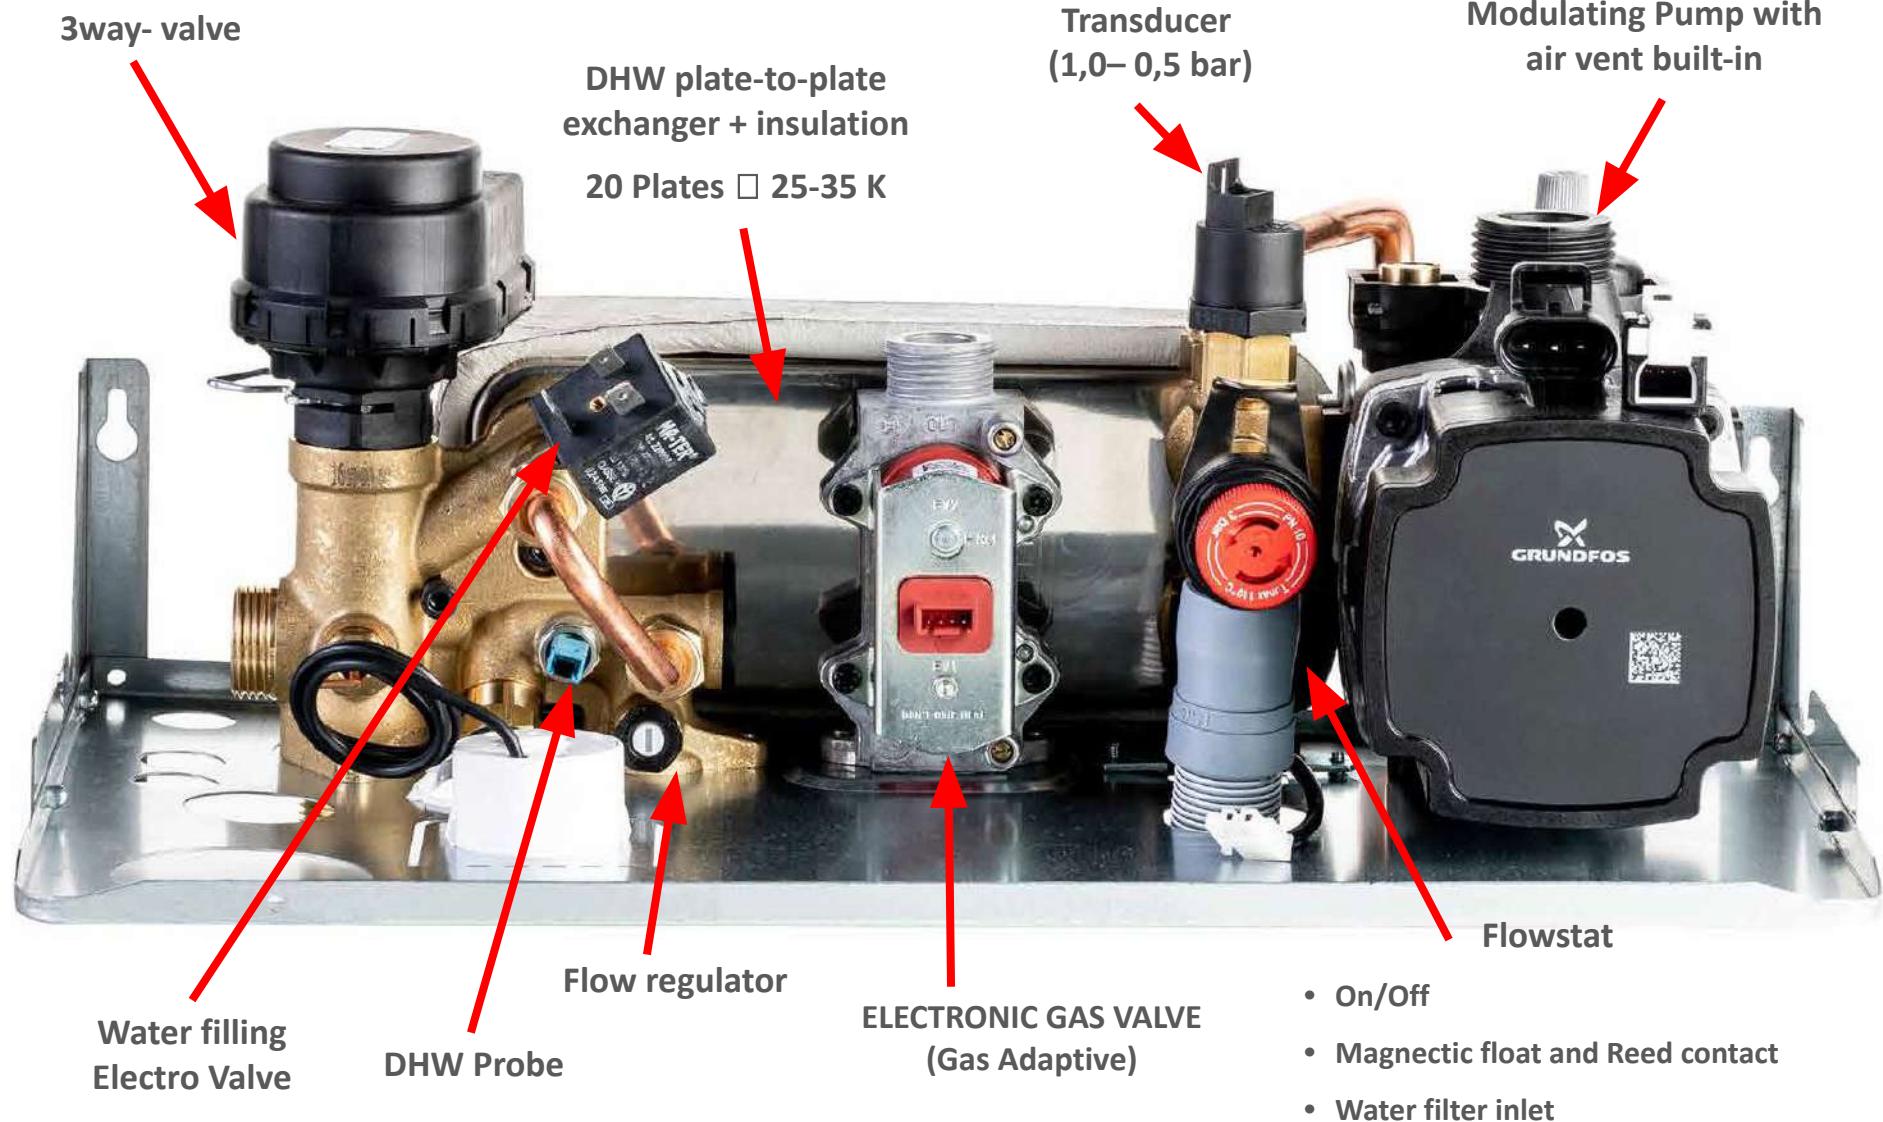

- New Condensing exchanger with bigger water flow
- I.C.S. (Intelligent Combustion System) which manages automatically Combustion
- Gas Conversion without components replacement
- Modulation Range 1:20 (35kW) - 1:15 (25kW)
- Hydraulic Brass Group with DIN connections
- Automatic water filling

# City Top K - Main Components

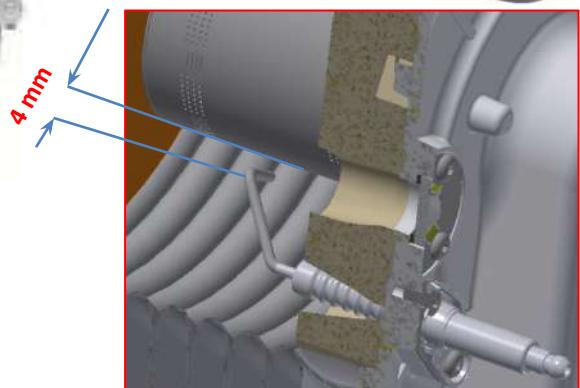

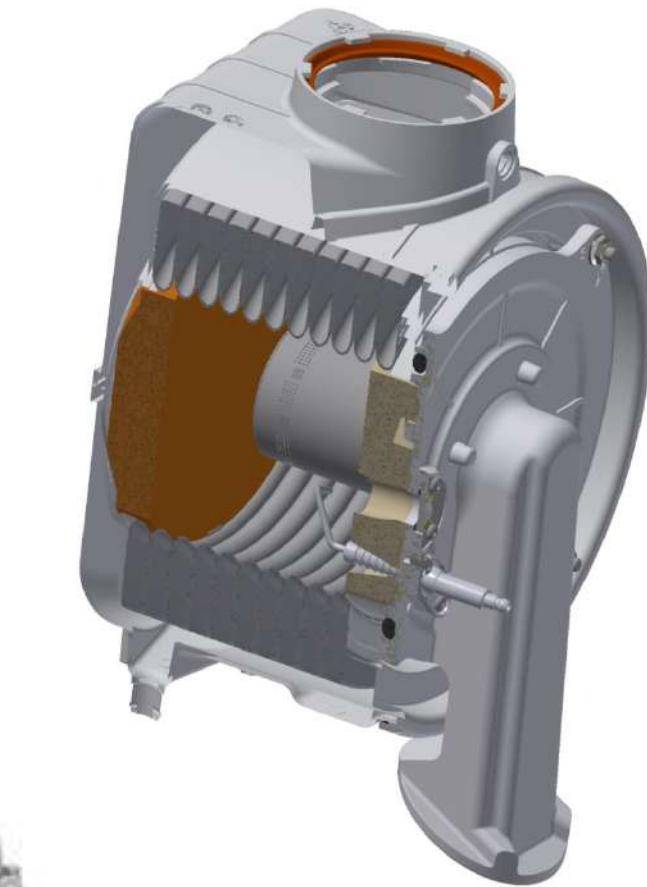

# City Top K - Hydraulic group

# City Top K - Main Exchanger

- External parts in **alluminium** □ lower boiler weight
- Single coil in Stainless steel **AISI 441**
- Kind of Teflon as material in contact with Condense
- Single Electrode for Detection and Ignition

(Distance from Burner = 4 mm)

- Coil Section **bigger**
- Better **resistance to scale** and **dirty deposit** from plant
- Ideal for **replacements** on existing installations and old plant
- No parallel coils means better cleaning
- No welding points
- Lower risk of water leakage

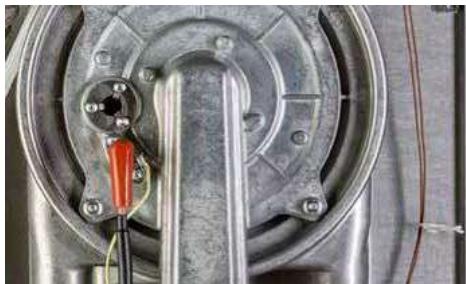

Coil Section City Top K

Coil Section City Plus K

## I.C.S □ INTELLIGENT COMBUSTION SYSTEM

1

System ICS allows combustion calibration and check, completely electronic.

2

Boiler is calibrated in Production.  
On the field, ICS system keeps on cheking and calibrating boiler in order to always get best working conditions.

3

Gas Valve receive electronic input from PCB in order to change its working.

No mechanical calibration is required

## ADVANTAGES SYSTEM I.C.S.

► HIGH MODULATION RANGE

► GAS ADAPTIVE FUNCTION  
Easy gas change: no components replacements, only Parameter change

► ALWAYS BEST POSSIBLE COMBUSTION

- = better efficiency and less consums
- = Less polluting emissions

► LESS INSTALLATION TIMING  
No manual operation for Boiler Calibration

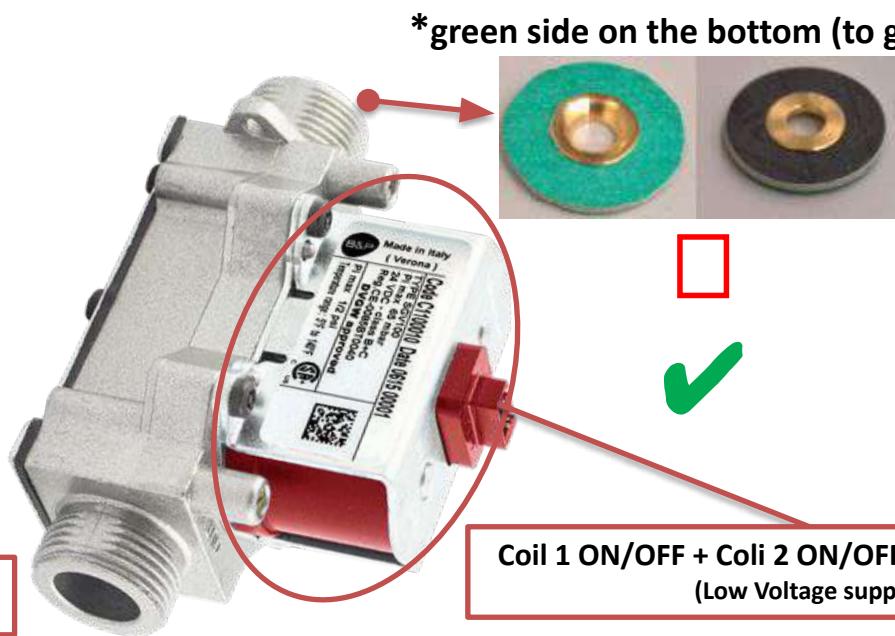

# City Top K - Gas Valve

## Nozzle\*

Ø 6  25 - 35 kW

The same nozzle for both power

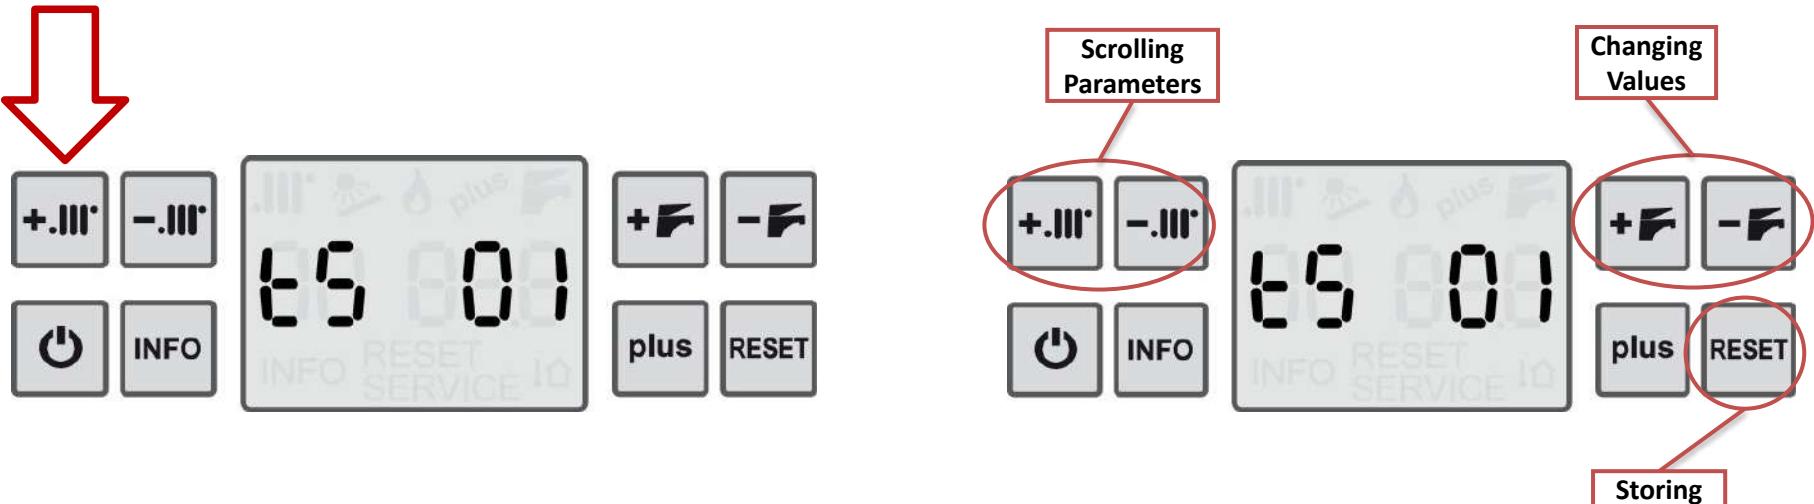

Gas Change: acting only to Par.1  
Par 1 = 0  G20 (Natural Gas)  
Par 1 = 1  G31 (Propane)

Coil 1 ON/OFF + Coli 2 ON/OFF and modulating  
(Low Voltage supply)

## Combustion Calibration table values

Mod.	Heat input	Natural gas G20		Commercial Propane G31		Air/Propane G230	
		CO <sub>2</sub> at Qn and igni- tion (%)	CO <sub>2</sub> at Qmin (%)	CO <sub>2</sub> at Qn and igni- tion (%)	CO <sub>2</sub> at Qmin (%)	CO <sub>2</sub> at Qn and igni- tion (%)	CO <sub>2</sub> at Qmin (%)
25	Nominal value	9.2	8.5	10.3	10.1	10.4	10.3
	Allowed range	8.2...9.7	8.0...9.0	9.5...11.0	9.0...11.0	9.5...11.0	9.0...11.0
35	Nominal value	9.2	8.5	10.2	10.1	10.1	10.0
	Allowed range	8.2...9.7	8.0...9.0	9.5...11.0	9.0...11.0	9.5...11.0	9.0...11.0

1. Boiler Mode selected (summer or winter)
2. Keep pushing buttons **+.III'**, **+F** for 10 sec. until display is showing on the **left «tS»** flashing alternatively with a number (n°of Parameter) and on the **right** a number which is the value of Parameter selected.
3. Pressing **+.III'**, **-.III'** for scrolling Parameters.
4. Pressing **+F**, **-F** for changing Parameter values
5. Storing values changed pressing button **RESET** for 3 sec.
6. Parameter Access still be active for 15 min; exit function pressing **power**

## Color Key

Standard Parameter for general uses

Suggested to not modify

Param	Description	Range	Factory Settings	Note
<b>01</b>	Type Gas	0 – 1	0	0 – G20 1 – G31
<b>02</b>	CH Temperature Range	0 - 1	0	0 – Standard Range 35 ÷ 80 °C 1 – Reduced Range 20 ÷ 45 °C
<b>03</b>	Slow Ignition Fan Revolution	80 – 160	Kind of boiler	Value in RPM = PAR03 x 25
<b>04</b>	Max CH power inlet	00 – 100	Kind of boiler	Percentage of Max Power inlet available. Changing this Parameter will switch ON boiler
<b>05</b>	Pump mode on CH demand	0 – 2	0	0 – Standard Functioning 1 – Pump always ON 2 – Pump always OFF
<b>06</b>	Dealy of re.ignition in CH demand	0 – 15	3	Value in minutes
<b>07</b>	Service Plant function activation	0 – 3	0	0 – Disabled 1 – Bleeding plant CH side 2 – Bleeding plant DHW side 3 – Bleeding plant both CH and sides
<b>08</b>	on/off Temperature on DHW demand	1 - 2	1	1 – fixed <input type="checkbox"/> OFF= 75°C , ON = 65°C 2 – SETpoint <input type="checkbox"/> OFF = SanSet + 3° ; ON = SanSet + 2°
<b>09</b>	Timing to reach the maximum power in CH demand	2 - 12	3	Time in Seconds (PAR x 10 sec)
<b>10</b>	Timing to reach the maximum power on CH demand after OFF for high temperature	1 – 10	2	Time in Minutes

# City Top K - Parameters

Param	Description	Range	Factory Settings	Note
<b>11</b>	Pre-heating setting	1 - 3	1	1 : T on = 25° C ; T off = 45° C 2 : T on = 30° C ; T off = 45° C 3 : T on = 35° C ; T off = 50° C
<b>12</b>	Chimney Sweeper function	0 - 2	0	0 – Function Disabled (normal working) 1 - Boiler forced at Max Power 2 - Boiler forced to Min Power

## AUTOMATIC CALIBRATION Based On Tolerances Of Components.

NO opportunity to modify these calibration values

The main PCB checks physical limits of main components, in order to supply them with right values and getting a good combustion quality.

- Set **par. 49** at value **5**

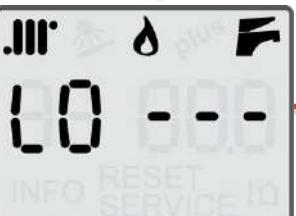

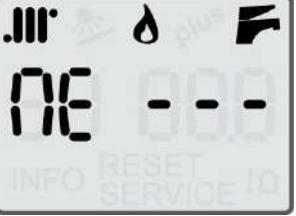

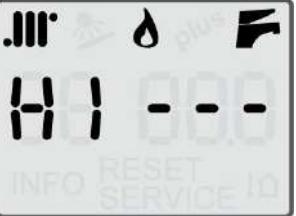

- Exit parameter mode pressing  and put boiler **ON** (Winter or Summer)

- Keep pressing buttons  and 

- After 6 sec, release previous buttons; display shows **HI**, press  leave it when display shows **AUTO**

# City Top K - Gas Valve AUTOMATIC Calibration

- Boiler starts AUTOMATIC Calibration
  1. it starts calibrating appliance on Max power “**HI**”
  2. then calibrating Ignition power “**ME**”
  3. finishing with Min power “**LO**”
- On the right of display it is shown “**- - -**” for each Power (**HI**, **ME**, **LO**)  
This means “CALIBRATION is RUNNING in this boiler power”  
(Complete Calibration could take approximately 10 min)
- Once finished Calibration on “**LO**” power, on the right side of display, a number is shown. This is “Calibration Value” for **LO** power and it is stored on PCB.  

- Pressing  or  is possible to scroll other powers (**ME** or **HI**) just for checking different Calibration Values on different Boiler power, but...
- **DO NOT MODIFY VALUES ON THE RIGHT:**  
**Boiler Could Not Work Properly**  

- Exit Calibration pressing  for 2 sec.

## MANUAL CALIBRATION for fine adjustment of CO2 values

Opportunity to modify the values of CO2 found during AUTOMATIC Calibration

- Set **par. 49** at value **0**
- Exit parameter mode pressing  and put boiler **ON** (Winter or Summer)
- Keep pressing 6 sec. buttons  and 
- After 6 sec, release previous buttons; display shows **HI**, press  please it when display shows **MANU**

# City Top K - Gas Valve MANUAL Calibration

- Boiler starts MANUAL Calibration
  1. it starts calibrating appliance on Max power “**HI**”
  2. then calibrating Ignition power “**ME**”
  3. finishing with Min power “**LO**”

- On the right of display it is shown “**- - -**” for each Power (**HI, ME, LO**)

This means “CALIBRATION is RUNNING in this boiler power”

(Complete Calibration could take approximately 5 min)

- Once finished Calibration on “**LO**” power, on the right side of display, a number is shown **0** (zero) **+F** **-F**

- This number can be changed pressing **+** or **-**, between **±3** (step 1);

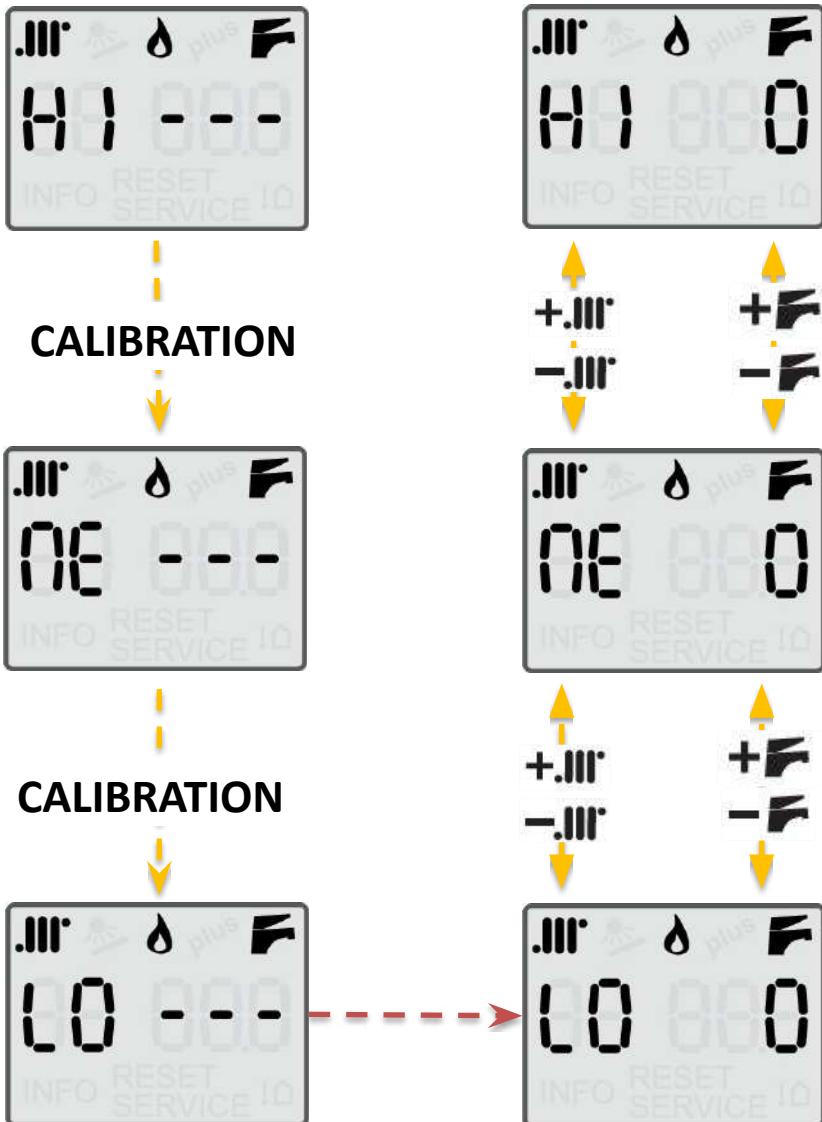

Every step means about  $\pm 0,1\text{-}0,2\%$  di CO<sub>2</sub>,

**+.III.**    **-.III.**

- Pressing **+** or **-** is possible to scroll other powers (**ME** or **HI**) and acting on that value for finding the best combustion value you can

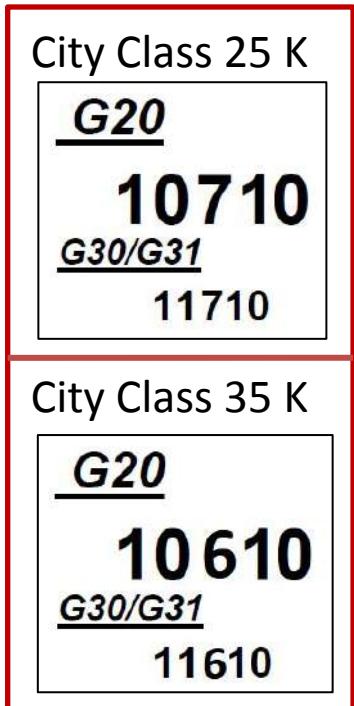

for 2 sec.

Operation / Components Replaced	Advised Procedure on Boiler		
	# 1	# 2	# 3
<b>Gas Conversion</b>	<b>AUTOMATIC CALIBRATION</b>	Check Combustion (CO2 values)	If necessary, <b>MANUAL CALIBRATION</b>
<b>Main PCB</b>	<b>AUTOMATIC CALIBRATION</b>	Check Combustion (CO2 values)	If necessary, <b>MANUAL CALIBRATION</b>

Configuration Code is placed close to the control panel and it is visible leaving metal cover

**G20**

**10710**

Digits	1st	2nd	3rd	4th	5th
Value	Aesthetic	Gas type	Power	Hydraulic	Not used

Once replaced PCB or after «Total RESET» procedure, Boiler has to be configured for model where it is mounted

- Display shows “Co nF.E”
- Keep pressing buttons  and : this way PCB recognize **Boiler Aesthetic** (1<sup>st</sup> digit)
- Set Parameter\* 60 (**Boiler Power**), which is equal to 3<sup>rd</sup> digit of Configuration Code, on left corner of Control Panel (i.e. 1 on picture) and store value pressing **RESET**.
- Set Parameter\* 61 (**Boiler Hydraulic**), which is equal to 4<sup>th</sup> digit of Configuration Code, on left corner of Control Panel (i.e. 2 on picture) and store value pressing **RESET**.
- Ending, PCB shows Configuration done.  
On display and on the sticker there must be the same **Configuration Code**

City Class 25 K
<u>G20</u>
<b>10710</b>
<u>G30/G31</u>
11710

City Class 35 K
<u>G20</u>
<b>10610</b>
<u>G30/G31</u>
11610

**TOTAL RESET = PCB is forced to factory settings**

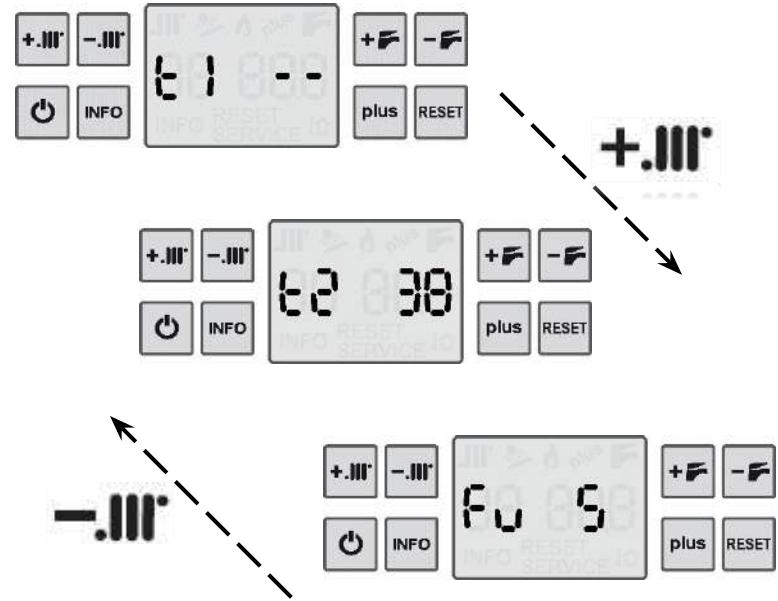

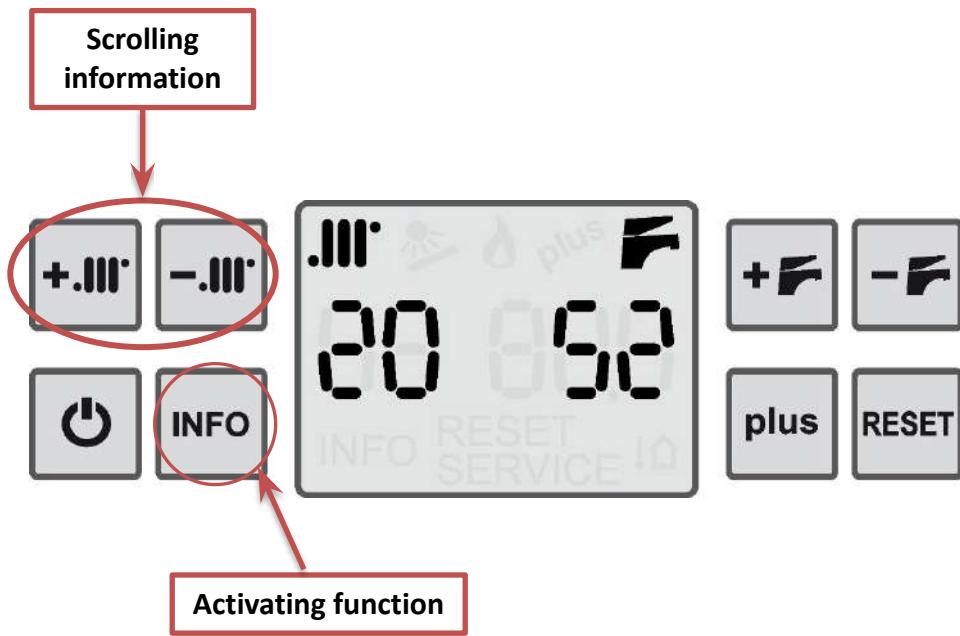

It is advised for solving some puzzling problem on the field

- Boiler Mode **OFF**
- Keep pressing for 15 sec buttons  and  and 
- When display shows “-” sliding, release button and press  to confirm procedure.
- Display switches OFF and switches ON again showing “Co nF.E”  
It means: “I need **AESTHETIC CONFIGURATION !**”

**After this procedure, Boiler needs PCB Configuration**

# City Top K - Info Menu

With a mode selected (summer or Winter) press

## Info shown:

**t1** : External Temperature (if present)

**t2** : Return Temperature

~~**t3** : not used~~

~~**t4** : not used~~

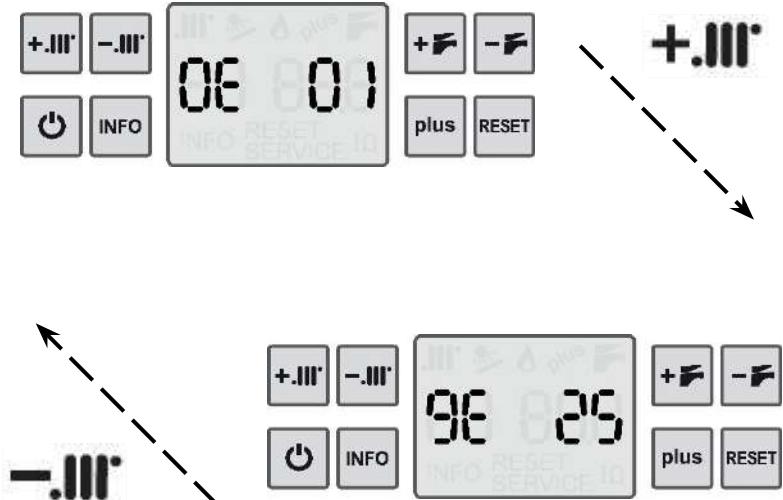

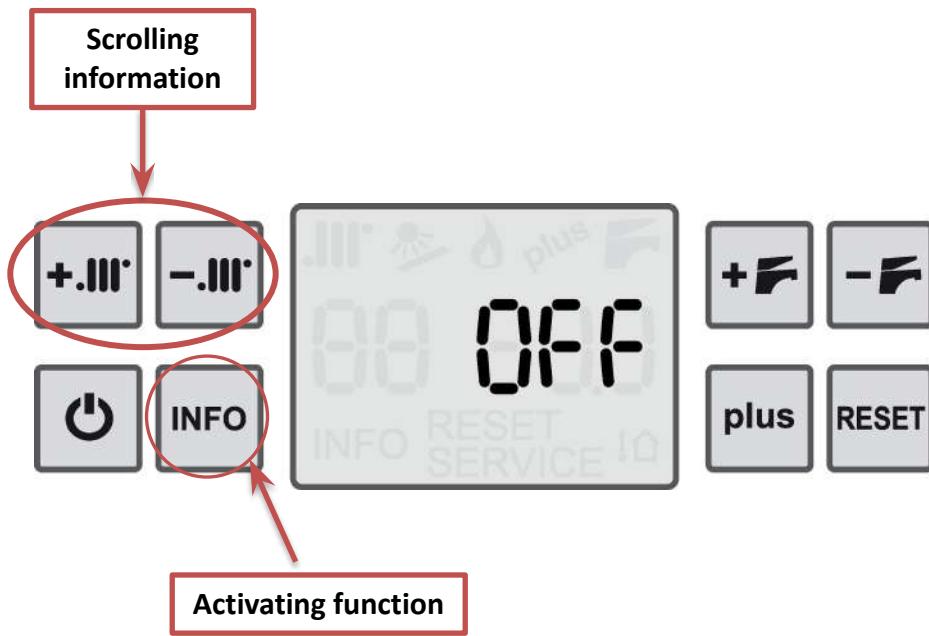

**P** : Plant Pressure

**Fu** : Boiler Status code

Exit function keep pressing

- 0** : No Heat demand present
- 1** : TA1 CH demand present
- 2** : TA2 CH demand present
- 3** : TA3 CH demand present
- 4** : CH antifreeze function ( T CH <5°C)
- 5** : DHW demand present
- 6** : Pre-heating mode
- 7** : DHW antifreeze function (if Temp DHW <5°C)

# City Top K - Errors History

With mode **OFF** press

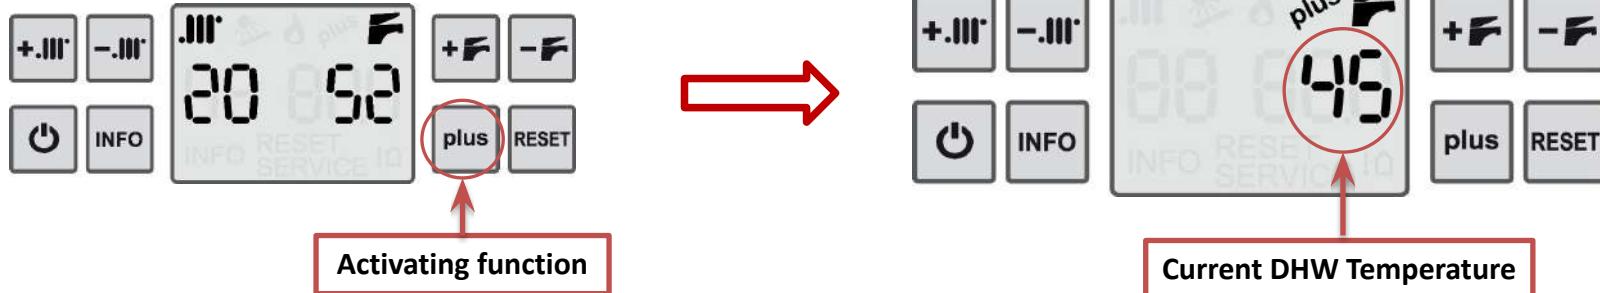

It shows **last 10 errors code**.

**0E** means **last error** appeared chronologically, **9E** is the **10<sup>th</sup> error** appeared chronologically).  
"Number" on the right is **Code Error**.

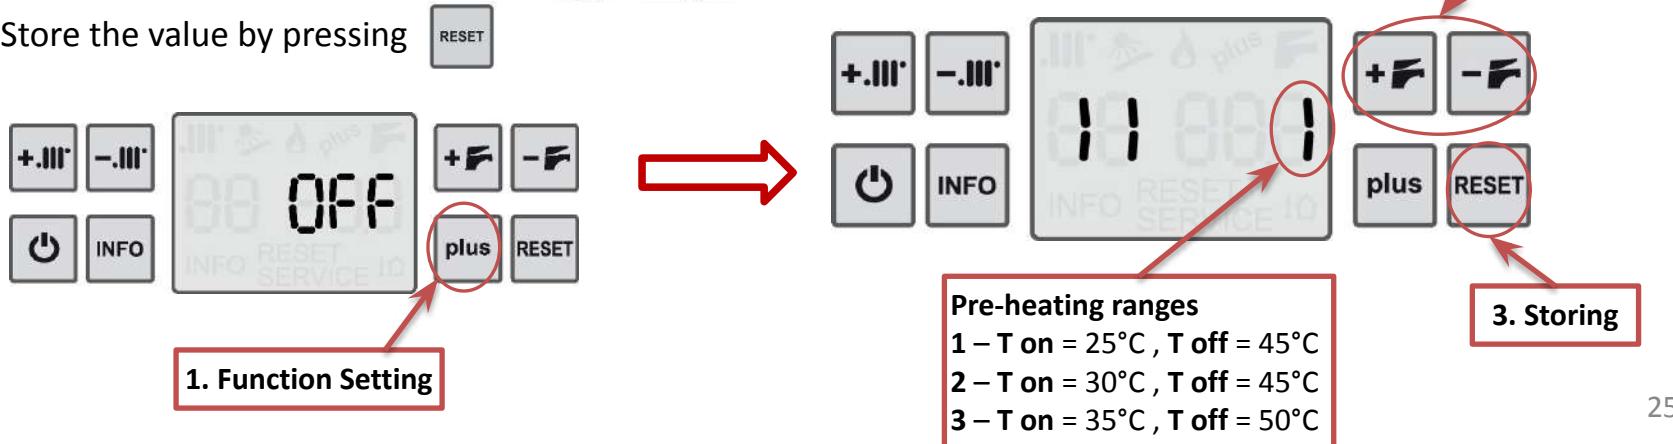

Exit function keep pressing

Boiler keeps the primary temperature (on the main exchanger) in a pre-heating range chosen by Par 11.  
 In this way boiler provides DHW quicker than standards instantaneous boiler

1. With a mode selected (summer or Winter) press briefly 
2. Symbols  and  will be flashing; temperature showed is the current DHW detected.

1. With a OFF mode selected keep pressing  for 3 sec.
2. Change the range value by pressing  
3. Store the value by pressing 

**RESET** = Pressing Reset, Error disappears and Boiler restarts

**SERVICE** = Boiler rerstarts only if root cause is OFF
